IAA elects 106 new Members

The International Academy of Astronautics (IAA), has elected 106 new members, many of whom will be inducted on September 28th, 2008 during the Academy Day Honor Night in Glasgow, Scotland.

The IAA is an honorary society with an action agenda. The Academy has a strong scientific program with each year about 10 standalone conferences around the world. The International Academy of Astronautics (IAA) is an independent organization of distinguished individuals elected by their peers for their outstanding contributions to astronautics and the exploration of space. The IAA has both its independent studies and conferences and collaborates with others partner societies. Although the IAA has many connections to other similar organizations, it is distinctive as the only international academy of elected members in broad area of astronautics and space.

IAA membership consists of individuals who have distinguished themselves in one of the fields of astronautics or one of the branches of science of fundamental importance for the exploration of space. Full members are elected for life, while corresponding members are eligible for full membership after two years, but retire after five years.

The Academy was founded by the leaders among the early space pioneers. Continuing that distinguished tradition, current members include the leaders and the key managers in all the space agencies and many space industries, leading space engineers and scientists, prominent space lawyers and judges, and outstanding individuals at the interface of space and society. The new members in alphabetical order are as follows:
