Ultra light weight deployable membrane structures

- Launch mass saving
- Mission propellant saving
- Basis for re-thinking existing and new mission concepts
- Scalable technology
- Controlled Deployment

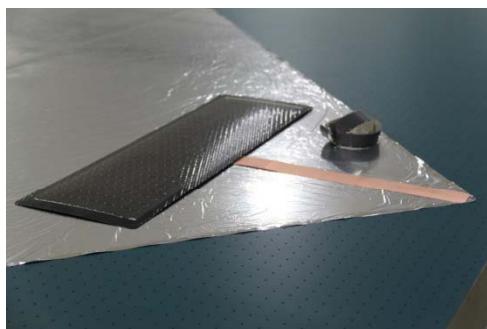

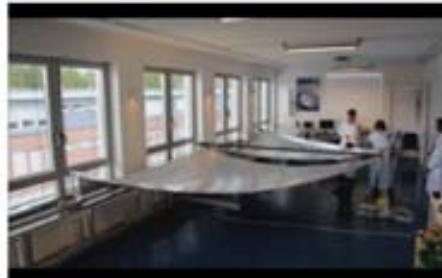

Use Cases

- Solar sailing, lightweight high Δv missions
- Ultra-lightweight solar power generation for mass critical and high power demand systems
- drag sail to deorbit spacecraft from LEO
- large reflectors for communication, science and solar thermal applications

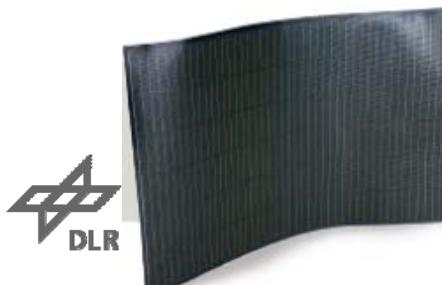

Deployment & Configuration

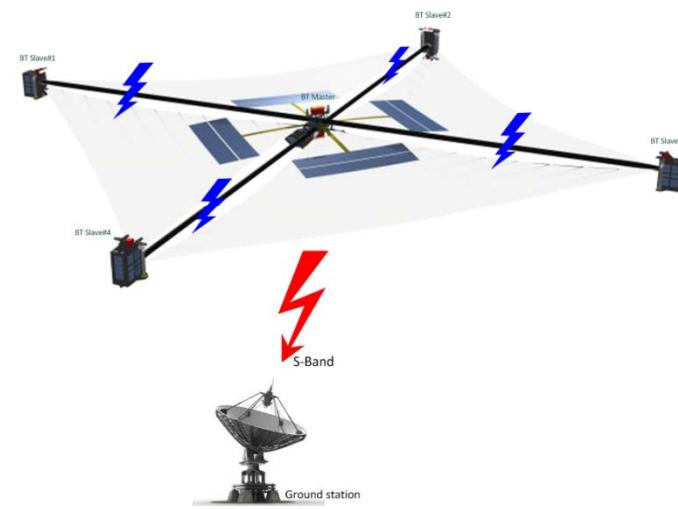

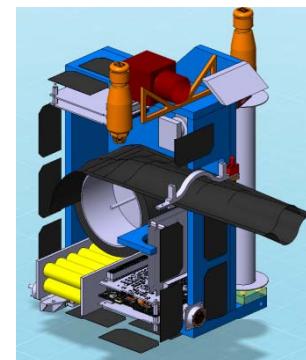

Sails

- Aluminum coated polyimide foil
- Additional protective oxide coatings
- Load introduction analysis and interface design
- **Embedded thin-film photovoltaics**

Qualification Testing

- Boom characterization test rig
- Vibration Testing
- Centrifuge Testing
- Fast Decompression
- Thermal Vacuum
- Laboratory Deployment

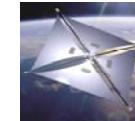

Configuration

- 4 sail segment, crossed booms
- 4 independent deployment units
- On board wireless communication between independent units

Thank you for your attention – see you in the poster session
